About Us

Started in 1990, Super Structures General Contractors, Inc. is a growing family-owned and operated business.

We believe that each of our clients deserves attention to detail, value engineering, fair pricing and a commitment to excellence for each of their building projects. There is no clearer evidence that our company is able to provide this than the fact that more than half of our workload is from returning clients and their referrals.

Our expertise includes metal buildings and conventional construction, and we offer in-house services that many other general contractors do not, allowing us to keep costs low while offering top-of-the-line products. We can also work with any client to design the perfect building for their needs. When you work with us, you will find that our owners are frequently on-site to ensure your building project is on track.
